## Make a 3D model

### We make a 3D Internet !!!

So you have a website which you use to attract new customers and to promote your product, e.g. an online shop or your company's business card website. A colourful, eye-catching design, photos of the products, the most detailed description... Well, your competitors have a website too: slightly better, slightly worse, a different range of colours... But, on the whole, the same "flat" photographs reduce the value of information and, as a consequence, lower the confidence to a product that the customer cannot look all over and form an opinion of.

Many customers claim that a major reason that stops them from buying from an online shop is that they do not get a sufficient visual image of the product. So one of the key factors affecting the sales efficiency of a website is how carefully and visually sufficiently it presents the information of the products. Some sites use video clips to describe a product, some use animated video clips, though the majority present photographs providing little information of their objects.

### HOW TO PUSH YOUR COMPETITORS INTO THE BACKGROUND? HOW TO WIN THE LOYALTY OF YOUR CUSTOMERS? HOW TO PUSH UP THE VOLUME OF SALES?

3D models are the most up-to-date method of presenting the appearance of a product. They allow a detailed view of the product, such as its look, design, dimensions, etc. However, up till now this option has been accessible only to large trading networks due to the high cost of building 3D models, which stems from the complexity of the 3D-modelling process.

**If you want to stand out, if you want to make your site informative and interesting for your customers, to make it have a zest – and interesting  
THEN OUR OFFER IS FOR YOU!**

The Internet service provided by us is the first in the world automated solution that makes the creation of 3D images of an object accessible to everybody.

**ONLY WITH US THE COST OF CREATING ONE 3D MODEL STARTS FROM**

# \$ 4.

We will help you to replace static photographs with **bright eye-catching 3D models** Now, when entering your site, your potential customer is going to be able to "twirl" the object, to zoom it in, and to have a closer look at its details. Our Internet service enables to significantly increase the volume of sales, to reduce the amount of returned merchandise, and to wipe out the border between virtual and actual shops.

## **3DBAZAR.COM MAKES IT POSSIBLE TO CREATE A HIGH-QUALITY 3D MODEL WITH YOUR OWN HANDS IN 10 MINUTES**

**FOR OUR CUSTOMERS' CONVENIENCE WE HAVE DEVELOPED A LINE OF SPECIAL  
PACKAGES, SO YOU CAN SELECT AN OPTIMAL VARIANT FOR YOURSELF**  
[DESCRIPTION OF PACKAGES](#)

Our service provides you with new opportunities to advertise your goods. A 3D photograph is not an object drawn by means of specialised software and thus costing a fortune. A 3D photograph is a series of photos processed and put together with the help of a special technology. The result is that you get a tremendous effect of the object's volume and reality. The selection of a product turns into an absorbing process akin to game, which increases the chance of the shop to sell the product.
